The Ohio State University - Columbus, OH

SKILLS

- Object-Oriented Programming
- Software Testing and Validation (Jest)
- Databases: MySQL, MongoDB
- React
- Node
- Express

PROJECTS

Tidder Blog

- This project is a reddit style forum. Allowing users to signup/login, create channels for posting, make blog posts, and comment on other users posts. This project was made with Express.js, MySQL, Node.js, Handlebars.js, and hosted on Heroku.

E-commerce Backend

- This is a purely backend application. Utilizing REST API's, an Express server, Node and MySQL. In this project the user can interact with an SQL database to get, create, update, and delete. This database represents a mock e-commerce business, with a category, product, tag, and product tag table.

Fitness Tracker

- This project was made with Node.js, Express, and MongoDB. Allowing users to add exercises and workouts and then displays total workout information for the last 7 days.

EmployeeDB

- Content Management System node terminal application for managing employees, roles, and departments within a company.
